

Preparation of Acrylic Templates

Templates come with protective paper on each side; simply peel off before using. They are pink in color (so you won't lose them in your fabric), as well as transparent which allows you to take advantage of certain fabric designs.

For the best accuracy while cutting with the Rotary Cutter, apply Quick Grips to each corner of the template; if it's a larger template, put one in middle along edge. Quick Grips are small circles of felt with adhesive backing. They keep templates from sliding on your fabric while cutting. Please Note! If you don't put the Quick Grips on the far corners, the fabric will move when you approach the corner with the cutter.

Cutting With Templates

Cut with ultimate speed without sacrificing accuracy. Bi-fold strips on small matboard so it's easy to turn your work as you cut around template with rotary cutter.
